Final-Year (4th Year) Computer Science Engineering Student (AI & ML) | Full-Stack Developer | AI/ML Engineer

PROFESSIONAL SUMMARY

Final-year Computer Science Engineering student specializing in AI & Machine Learning, with close to two years of hands-on, real-world experience — not a fresher profile. Since third year, has been co-building and running FixmateHub, a live home-services platform, end-to-end from product development through execution, alongside academic and freelance projects spanning full-stack web development, computer vision, and machine learning (XGBoost, YOLO). Skilled in React.js, Python, Firebase, MySQL, and ML model development, with strong coursework in NLP, DBMS, Data Warehousing & Mining, AI, ML, and Deep Learning.

TECHNICAL SKILLS

Languages & Web: JavaScript, Python, React.js, HTML5, CSS3, PHP, Node.js, Blazor

AI / Machine Learning: Machine Learning, XGBoost, YOLO, Computer Vision, Model Training & Testing, Real-Time Object Detection, Gesture Recognition

Database & Backend: MySQL, phpMyAdmin, Firebase, Cloud Firestore, Firebase Authentication, Flask, REST APIs

Tools: Git, GitHub, React Router

Relevant Coursework: NLP, DBMS, Data Structures, Data Warehousing & Mining (DWM), AI, ML, DL

EXPERIENCE

FixmateHub LLP — Startup

Co-Founder, Founding Team (Product Development & Execution) | Since 3rd Year (~2 years) – Present

- Part of the founding team, building and running a home-services platform end-to-end (www.fixmatehub.com) alongside college — ongoing product responsibility, not a short-term or fresher-level engagement.
- Developed a React.js + Firebase/Firestore application with a multi-step booking system, Direct Mate/Vendor Mate service-provider model, and flexible pricing engine (fixed, hourly, per-person, per-sq-ft, quotation-based) across multiple service categories.
- Built the admin service-management module for configuring categories, pricing types, booking flows, and custom fields.

PROJECTS

Preview Cloud — Final Year Major Project

- AI-powered platform that analyzes a GitHub repository, detects its framework and build configuration, and automatically builds and deploys a live preview.
- Built with React.js, Vite and React Router; includes automated build pipeline, environment/dependency analysis, and AI-assisted build-error troubleshooting.

AI-Based Personality Prediction System

- Built a personality classification system (Big Five / MBTI) using XGBoost, with a React.js frontend, Firebase Authentication, and an integrated AI chatbot assistant (Arjus).

Sign Language & Real-Time Object Detection Systems

- Developed a computer-vision sign-language recognizer (Kaggle dataset) that identifies A–Z gestures and words via webcam and converts them to text.
- Built a real-time object detection app using YOLO (Flask/Python backend) with a React.js interface for bounding boxes and multi-object labels.

Society Management System — Freelance Project

- Built with Blazor and MySQL; role-based login system covering the complete society lifecycle — from new flat allotment/onboarding through ongoing maintenance management.

Hospital Management System — 2nd Year Academic Project

- Designed and built with a structured relational database (phpMyAdmin/MySQL) for managing patient records, appointments, and hospital administration.

ACHIEVEMENTS

- College Internal Hackathon (previous year) — selected with two separate problem statements, both cleared selection: a Smart Waste Management System, and an AI-based posture-detection system that scores accuracy during exercises/games.
- Final Year — cleared selection at both department-level and college internal-level hackathons for the problem statement “3D ULPIN Generation & Vertical Property Mapping System”; currently at the screening round.

EDUCATION

B.E. Computer Science & Engineering – AI & ML — VIVA Institute of Technology, University of Mumbai (2022 – Present)
CGPI: 7.60 | Semester 6 SGPI: 8.70

HSC — Shri Nawab High School, Bihar Board (2022) — 64.40%

SSC — Sen Sec Delhi Public School, CBSE (2020) — 64.60%
